 lihao.academic@gmail.com

I am a Master's student in Data Science at the University of Milano-Bicocca. Having majored in Electronic Engineering during my undergraduate studies, I possess a solid foundation of knowledge in electronic engineering, physics, mathematics, and AI. I am currently seeking opportunities to further my education and engage in research within these fields.

EDUCATION

Guilin University of Electronic Technology

Bachelor of Engineering in Optoelectronic Information Science and technology

Sept. 2019 - July. 2024

GPA: 77%

University of Milano-Bicocca.

Master of Science in Data Science

Sept. 2025 - Present

Current GPA: 26.66/30

AWARDS (IN MATHEMATICS DURING BACHELOR'S PERIOD)

- First Prize at the 16th GUET Mathematical Modeling Competition in 2020
- Third Prize at the 12th National College Student Mathematics Competition (For Non-Mathematics Majors) in 2020
- Second Prize at the 17th GUET Mathematical Modeling Competition in 2021
- Second Prize at the National College Student Mathematical Modeling Competition, Guangxi Division (Undergraduate Group) in 2021
- First Prize at the 14th National College Student Mathematics Competition (For Non-Mathematics Majors) in 2022

SKILLS

Programming: C/C++, Python, R, $\text{\LaTeX}$

Tools: Git/GitHub, Pandas, NumPy, SciPy

Mathematical skills: regression analysis, statistical modelling, hypothesis testing, convex optimization

English: IELTS 6.0

PROJECTS DURING MASTER'S PERIOD

Action Recognition on HMDB51

June 2026

- Built a robust video action recognition pipeline
- Two-Stage Fine-Tuning strategy combined spatial feature extraction (MobileNetV2) with temporal sequence modeling (Bidirectional GRU)
- Used Frame Differencing as augmentation to suppress static background noise

Kaggle House Prices

Sept. 2026

- Implemented a Linear Regression based on Kaggle House Prices dataset, including cleaning, feature engineering, cross validation, pipeline, and evaluation
- Modeled via RobustScaler, 1-Hot Encoding, and used BIC as model reduction method, conduct 3 feature sets gradually
- fitted models and generated Kaggle submission, modularized into reusable Python code.

Pairs Trading on the S&P 500

July 2026

- Implemented a cointegration-based pairs-trading strategy on the S&P 500
- Modelled by regression based on cointegration of log prices
- Found a stable pairs and achieved risk diversification based on low-correlation pairs

Traditional and Digital Financial Literacy in Italy

July 2026

- Reconstruct the official Traditional and Digital Financial Literacy score
- Compare the two scores using Spearman correlation and Divide respondents into four profiles
- Executed the full process from conceptualization to operationalization, quantifying abstract concepts into comparable metrics
